

4198 Flatwash Slimline Shower Mixer

The Flatwash shower mixer is a progressive mixer specially designed for use with the Flatwash pull-out shower. The mixer operates by simply turning the lever to start the flow and regulate the temperature. The further you turn, the warmer the water gets.

The innovative slimline design helps the shower seamlessly blend into the installation surface. The mixer can also be installed on a horizontal or vertical surface. An installation plate for the mixer and pull out shower is also available as an accessory.
